Python software engineer with commercial experience building and maintaining backend software, and a track record of shipping end-to-end projects, including a full algorithmic trading system. Comfortable working with APIs and SQL databases, and a fast, self-directed learner keen to grow as a software engineer in a challenging, fast-paced environment.

WORK EXPERIENCE

Software Developer, Diegesis Ltd. September 2025 – Current

- Develop and maintain software for the Office of National Statistics (ONS), writing Python alongside Bash, C and 4GL, and working with SQL databases.
- Contribute to an end-to-end Python application which converts legacy database systems to a modern frontend and modern backend, handling complex real-world data, using a custom built and trained AI model.
- Collaborate within a small team, taking ownership of and writing clean, maintainable code.

Peer Review Manager, Editorial Office Ltd. December 2023 – September 2025

- Critically assessed scientific papers for BMJ Open, requiring keen attention to detail.
- Determined each paper's scope and used it to identify suitable expert reviewers.
- Worked with the Prophy team to evaluate an AI-powered reviewer-matching system.

TECHNICAL SKILLS

- **Languages:** Python, SQL, C, Bash, Typescript, Node.js
- **Backend and data:** REST API integration, relational databases (SQL)
- **Data and Machine Learning:** PyTorch, TensorFlow, ScikitLearn, NumPy, Pandas
- **Performance and HPC:** Numba, Cython
- **Tools and Infrastructure:** Unix command line, Git, Docker, Kubernetes, cloud deployment (Oracle Cloud)
- **Frontend:** React, Expo, Streamlit

PERSONAL PROJECTS

Stock Trading bot (PyTorch + Streamlit):

- Designed, built and deployed an end-to-end system: ingesting market data from yFinance API, training a PyTorch LSTM, and integrating the Alpaca trading API with a Streamlit dashboard deployed on Oracle Cloud.
- Demonstrate ownership across ingestion, modelling, API integration and cloud deployment. Built using an AI assisted development workflow (Claude).

Frontend Development (React / Expo):

- Built a nonogram puzzle game with React including custom image importing functionality, interactive grid rendering, touch-gesture handling and component-based architecture.

EDUCATION

MSc Scientific Computing and Data Science, University of Bristol, Distinction 2024 – 2025

- Modules in Software engineering, high-performance computing, and artificial intelligence.
- Thesis: 78% on my molecular dynamics of the epidermal growth factor receptor using HPC clusters.

BSc Pharmacology, The University of Bristol, First Class Honours 2020 – 2023

- Received the R. B. Barlow award for the highest research project grade in my cohort (82%).

Poole Grammar School 2014 - 2018

- A levels: A* in Maths, Physics, Chemistry

INTERESTS

- Personal programming projects to teach myself new languages and techniques.
- Surf-trip planning and swell-chart analysis; electronic music production and DJing; PADI-qualified scuba diving.
